

The 15th AACR cancer progress report highlights scientific advances

The American Association for Cancer Research (AACR) released the 15th edition of its annual Cancer Progress Report. A cornerstone of the AACR's educational and advocacy efforts, this comprehensive report provides the latest statistics on cancer incidence, mortality, and survivorship and highlights how federal investments in basic, translational, and clinical cancer research and cancer-related population sciences have led to impressive scientific advances that are improving health and saving lives.

A new tool in the fight against obesity: Orforglipron's substantial weight loss results

New research presented at the Annual Meeting of the European Association for the Study of Diabetes in Vienna, Austria (Sept 15-19) and simultaneously published in NEJM shows that daily treatment with the new once-daily GLP-1 agonist orforglipron results in substantial weight loss in people living with obesity who do not have type 2 diabetes.

AI Psychosis: How Artificial Intelligence May Trigger Delusions and Paranoia

'Artificial intelligence (AI) psychosis' is an emerging concept at the intersection of technology and mental health that reflects how AI can shape, and sometimes distort, human perception. As society becomes increasingly reliant on AI and digital tools ranging from virtual assistants to large language models (LLMs), the boundaries between fiction and reality become increasingly blurred.
